HOLISTIC APPROACH TO GRAFFITI CONTROL

Small Piece Installation Procedure

Small Piece Installation:

Installation of small Graffiti Shield pieces are quick and efficient, but it does have some steps we recommend for a flawless installation.

- Fill a standard spray bottle with clean filtered water.
- Add Baby Shampoo, 2 capfuls for standard spray bottle, and shake well.
- Spray the surface with soap and water and scrub the surface with a white scrubby or if the surface is very delicate then just use micro fiber towel.
- DO NOT USE ANY BLADES.
- Wipe the surface by using micro fiber cloth or paper towel. Make sure to wipe well and leave a lint free surface.

Small Piece Installation:

- Now spray the surface with a fine mist to make sure the area is wet.
- Next, take your small piece and remove the release liner. Spray the adhesive with the soap and water solution. Misting the adhesive is best and make sure the entire piece is wet.

Small Piece Installation:

- Carefully place the small piece on the panel. Move accordingly into place as needed.
- Then spray the outer part of the piece with the soap and water solution. Again, misting is best.
- Squeegee the small piece with your gold card or hard card by doing a pulling motion. Be sure to take your time and remove as much water as possible with semi force on the film.
- Be careful of any edges or cutouts to ensure you do not fold or crease the film.
- Dry the edges with gold card wrapped in paper towel.
- Then wipe entire piece with micro fiber towel.
- Piece is complete.
